Re: Request for Proposal to Purchase Water & Sewer Services

Sunrise Coal, LLC would like to submit to the Village of Homer an official Request for Proposal to Purchase Water & Sewer Services for our Underground Mining Operations in Vermilion County, Illinois. The supplied services would include:

- 1) Potable Water Supply & Sewer Services - To be used for drinking, showering, and other typical run-of-business potable water and sewer needs. The preliminary anticipated potable water needs would be approximately 2000 -4000 gal/day.
- 2) Non-Potable/Non-Treated Water Supply - To supply both the underground mining and coal processing (wash plant) operations with a minimum of 500 gal/min (540,000 gal/day). The anticipated initial need would be for approximately 300 gal/min (325,000 gal/day). However, the system will need designed for a minimum usage of 500 gal/min (540,000 gal/day) for potential growth and expansion.

The purpose of this request is to develop a preliminary cost estimate for the Village of Homer to supply water and sewer services to our mining operations. The detailed plans and specifications of water source, pumps (power & housing), and lines will be developed in conjunction and cooperation with Sunrise Coal. It is anticipated that the services will need to be delivered by January 2014.
